PROFILE

Graphic Designer with over six years of experience specializing in typography design, color management, and color planning. Expertise in creating visually compelling designs with a strong focus on detail and brand consistency across digital and print platforms. Proficient in managing multiple design projects while meeting deadlines. Continuously expanding skills in front-end development (HTML, CSS), translation, streaming and podcast production. Passionate about art, foreign languages, and creative technologies.

WORK EXPERIENCE

DESIGNER iBUYPOWER January 2026 -

- Main visual, typography, and banner design for weekly promotional events
- Commercial product editing
- Collaborate with web team and marketing team on social and promotional events

DESIGNER InfoLink Consulting Co., Ltd. March 2022 - May 2024

- Yearly report white paper and monthly e-magazine design and production
- Logo design, typography, main visual, poster, flyer, and merchandise design
- Motion graphics, short ad videos, website and system interface layout design
- Color index for each department

DESIGNER Sky Digi Entertainment Co., Ltd. July 2020 - February 2022

- Quality control for the subtitles in English and Chinese
- Typography design for the Chinese titles of the films
- Cinema theme display curation

INTERN DESIGNER Sky Digi Entertainment Co., Ltd. Aug. 2019 - June 2020

EDUCATION

FU JEN CATHOLIC UNIVERSITY Department of Communication Arts September 2015 - June 2020

- I curated an oil painting exhibition, painted over 50 paintings, and made a picture book with an audio version on my own as the graduation project.

ON THE ROAD TO NET ZERO

CH1 PV 1.1 DEMAND

Regional markets: China, the U.S., Europe (EU and the U.K.)

China

China sees solar capacity increasing rapidly. The nation added 53 GW in 2021, a 10% year-on-year increase. Distributed generation projects accounted for 55% of total additions, hitting a milestone of overtaking the share of utility-scale one for the very first time. Distributed generation projects will keep expanding, becoming the major driving force behind the development of Chinese PV industry. As of the end of 2021, China has 306 GW of PV capacity connected to the grid.

In 2022, China connected 87 GW of PV capacity to the grid, a 58% increase on 2021's 32 GW. Subject to lofty prices across the supply chain, distributed generation projects underpinned demand during the first three quarters. The fourth quarter was expected to see an installation rush due to lower supply chain prices, module makers vying for market share and ranking, and the traditional high season. However, prices stay elevated. As a result, installation was not as active as expected, with 34.8 GW added to the grid. Utility-scale projects account for merely 36.3 GW of the addition in 2022, while residential and C&I projects saw an increase to 25.2 GW and 25.9 GW, respectively. Distributed generation projects represent 58% of the total addition. In 2023, as module prices decline, the previously postponed utility-scale projects are likely to reinstate, pushing up demand. China could cumulate 150 GW of installed PV capacity in 2023.

Long been a major driving force behind the rapid growth of the global PV market, China is committed to the ambitious goals of achieving carbon peak by 2030 and carbon neutrality by 2060. In 2021, solar energy reached grid parity in China. The nation aims for 20% of its electricity consumption to be met by

InfoLink
CONSULTING

InfoLink Consulting is a world-leading renewable energy research and consulting firm. From market research to data analytics, consulting, and net-zero solutions, InfoLink offers a comprehensive suite of services tailored to meet the unique needs of each client, empowering them to make informed decisions, optimize operations, and achieve their strategic goals. With a dedication to providing real-time, research-based information and a commitment to building long-term relationships, InfoLink continues to earn the trust and confidence of industry leaders as an indispensable partner to navigate the complexity of today's rapidly evolving business landscape.

We work with...

Manufacturers: Jinko, Panasonic, Sharp, AUO, Trina, Longi, Hanhwa O-cells, Sunpower, JA Solar

Energy sector: Shell, BP, Eneco, Iberdrola, Enel, TotalEnergies

Renewable developers: Reliance, Engie, Sembcorp, CIP, Air Products, JSW, O2powers, AQUILA, eDF
... and **160** more industry leaders.

SOLUTIONS DRIVING YOUR BUSINESS EVEN FURTHER

PV competitor analysis

Gain a strategic advantage with InfoLink's PV competitor analysis solution, encompassing supply-demand modeling, short-term, mid-term, and long-term price forecasts, technology and product-wise competitor analysis, and comprehensive competitive benchmarking.

PV cost reduction consultation

Achieve significant cost savings and increased profitability with cost structure analysis, benchmarking with industry leaders, cost-benefit analysis, and tailored cost optimization strategies.

B2B clean electricity matchmaking

Unlock new business opportunities and foster sustainable partnerships in the renewable energy sector with customized clean energy solutions, analysis of renewable energy PPA prices, electricity market competitiveness analysis, and efficient matchmaking services.

Why us?

Comprehensive supply chain information

Discerning market perspectives

Expertise in data analysis and strong stance in the renewable energy industry

Feasible, tailored-made solutions

Energy storage supply and demand outlook for 2021-2030

The world cumulated more than 20 GWh of energy storage capacity in 2021, with the U.S., China, and Europe dominating 80% of the global market. While the installation volume was lower than expected, it still increased over 100% from 2020 despite the pandemic and new material price surge. In addition to surging demand from ESS integration with renewables such as solar and wind, adoption of home energy storage in the U.S., Germany, Japan, and Australia is also increasing continuously. However, short supply of cells could hinder development of energy storage. In light of this, cell manufacturers in China, Japan, and South Korea are expanding capacity rapidly, which is expected to help ease shortages in 2023.

Global ESS capacity projected to reach 40 GWh by 2022, with solar-plus-storage share surpassing 30%

More than 90% of the energy storage in the front of the meter storage market is deployed with renewable energy in the U.S., while more than two third of the projects in China have introduced policies for ESS application with renewables. Infolink projects the share of solar-plus-storage to reach 31% in 2022. This year, the world's installed energy storage capacity is expected to reach 40 GWh, with China's running right behind with 10 GWh of ESS capacity. Driven by policy framework, PV development, and supply chain advantage, China will see the fastest growth of solar-plus-storage. Infolink put forecast for global solar-plus-storage application in 2022 at 28 to 35%.

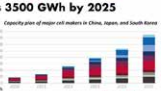

The application of solar-plus-storage is expected to exceed 40% by 2025, and 50% by 2030. The U.S. and China are the two dominating figures of the world. The former, with other matured ESS market and stable PV development, will see solar-plus-storage application grow steadily but slowly. China, spurred by local policies and large-scale PV installations, can see evident growth until 2025.

In the residential storage sector, the U.S., Germany, Japan, and Australia together amassed more than 10 million residential solar installations and 1.5 million ESS installations, with nearly 14% of solar-plus-storage installations. By 2030, the countries will accumulate 18 million solar installations and 4 million ESS installations, with 25% of solar-plus-storage installations.

Cell capacity additions to surpass 3500 GWh by 2025

As demand from EV batteries and energy storage grows, cell shortage caused inflation on battery prices is not continuous. From this year onward, production capacities of major cell makers in China, Japan, and South Korea will gradually come online, reaching beyond 3000 GWh by the end of this year, and exceeds 3500 GWh by 2025. This will allow short supply to ease in 2023 at the earliest.

Link the Value for You

Renowned as the most authoritative source provider of PV supply chain, our services enable global companies to keep up with the changing pace and competitive landscape of the Asian market.

Following the U.S.' imposition of AD/CVD and section 201 tariffs and its sanctions against Xinjiang, where to manufacture, what technology to use, how to optimise costs and how to develop subsequent policies again become the center of attention, taking new entrants a long time to find out answers to these questions.

With intuitive understanding of the market, we can quickly get hold on capacity, costs, technology, and policy trends, connecting information and develop big picture insights to help our clients make decisions in competitive situations.

HOW WE CAN HELP

- Technology selection**
With a wide range of technology and equipment options in the industrial chain, we work closely with equipment manufacturers and R&D engineers to help you take the best path from the very beginning and avoid unnecessary spending.
- Cost optimization**
Based on a thorough cost study, we help you benchmark with Chinese manufacturing costs to find the best materials and optimize manufacturing costs.
- Risk assessment**
With comprehensive market data on supply and demand, as well as an extensive network in the industry, we help you identify potential risks in each stage of your expansion plan.
- Competitor analysis**
As capacity expansion continues, we help you analyze your strengths and weaknesses in terms of cost, technology, and sales channels in comparison with your competitors to enhance your competitiveness.

- Highest time of visit: 500+ a year
- Most authoritative PV spot price index
- Most comprehensive supply and demand database
- Most thorough information of technology and costs

RECESSARY

Deep dive into RENEWABLE ENERGY and CARBON MARKETS

RECESSARY, which stands for "Renewable Energy and Carbon Awareness is Necessary," is dedicated to delivering in-depth insights and information of renewable energy and carbon market developments, with a focus in Southeast Asia.

Our platform compiles market information, policies, case studies, and supply chain movements to help businesses seeking opportunities in the SEA region keep up with industry trends and achieve their goals.

- Obtain industry insights and data
- Stay ahead of the game amid energy transition
- Deepen knowledge and ESG strategies for business performance

WHAT WE DO

OUR MISSION

Amid the global movement towards carbon neutral and the shift of supply chains to Southeast Asia, RECESSARY provides companies and investors who are looking to expand into the region with valuable insights, strengthening their business with carbon reduction plans and renewable energy purchase strategies as the world tilts to a net zero future.

RECESSARY helps companies get their stories and ESG information published, helping businesses reach their market more effectively and help investors make better investment decisions. We also organize events to foster collaboration among different sectors and create commercial opportunities.

Global outreach with a focus in Southeast Asia

Neutral and diverse perspectives

Overcome barriers to sustainability

Accelerate the time it takes to reach carbon neutrality

燒腦的犯罪鬥智、衝擊視覺的跑酷極限 一部翻轉結局的動作鉅獻

崔斯特是一名具有練武天份的孤兒，整個倫敦街頭都是他的遛狗作伴，為了躲避警方追趕，因此轉就出一身與天奮鬥、上天下海的跑酷技能。某次因為在電車上偷跑，被交警逮個正著，幸得保安英雄出手相助，進而認識了以貴族為首的犯罪集團，集團成員有電腦駭客貝茲、迷人的小可愛小紅以及貴族的頭號機靈克絲。貝茲收買這些街頭孤兒，並於他們「求生」技能，他將選擇稱為「甜蜜的危險」。眼見頭號機靈克絲失竊已久，他即將在倫敦成功以偷天換日之計將贖金交回。不料，心狠手辣的克絲想黑吃黑，不惜奪奪小紅作為人質，同時，警方也早已盯上崔斯特並對其破網以天。面對友情、愛情與正義，崔斯特該如何抉擇呢？

OIL PAINTING EXHIBITION AND PICTURE BOOK

Painter is my graduation project. It includes an oil painting exhibition, a picture book, and an audio book.

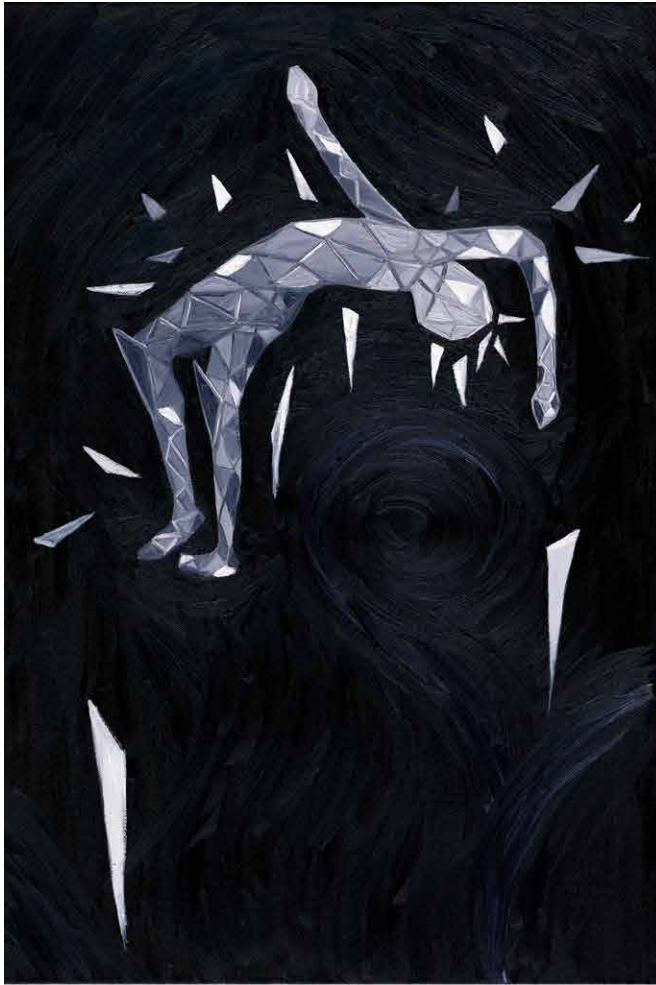

Painter is a fairytale in a distant future. It's about Painter, the protagonist, getting a magic pen that can revive the dead by drawing them on the canvas. In order to find the highest entities, The Truths, he starts an adventure with his friend, Astronaut.

Painter and Astronaut

Oil on Canvas , 45 × 65 cm

The main visual of the exhibition

The War of Truths (Top)

FILM MAKING

I was the script writer in most of my college film-making assignments. The most iconic one was the short film *3792*, my junior year project.

3792 is a story about a talented yet colorblind art student, Bai, asking his classmate, Hei, to help finish a portrait for the assignment of Color Theory.

Stills from *3792*

These actors are also the voice actors of my later work *Painter*.
